

ABSTRACT

1 A system for adjusting audio output including a
2 transmitter unit adapted to be carried by a user and a
3 sound generating system. The transmitter unit includes a
4 memory and a signal transmitter. The sound generating
5 system includes a sound generator, a signal receiver,
6 means for altering a sound signal from the signal
7 generator based upon a signal transmitted by the
8 transmitter to the receiver, and speakers connected to
9 the altering means.
